

Jack's Restorations

Check out this month's Mini restoration - Jack Jetson's best restoration yet! Some more information pertaining upcoming events are also included, check them out!

This Mini MKI Cooper S restoration project took place on a car which has racing history in new Zealand and was purchased at a classic car auction in the U.K.

The Mini was delivered to us for a complete strip. As part of the restoration we had to fit a complete new front end, various toe-board and bulkhead repairs, m machine floor pan, heritage doors, m machine rear bulkhead, heritage rear panel and modified boot floor.

Now the restoration work is complete, the Mini is now set to travel to France where it'll be tested and furnished - Stay tuned!

The restoration was carried out over an 8 week period.

Performance Upgrades

The engine is the most important part of the car - we needed to rewire the interior an switch out the engine.

Tech Integration

We're integrating cutting-edge tech into this Mini, including a self-driving system and advanced navigation system.

Finishing Touches

We're adding the finishing touches to this Mini, with a custom paint job, custom wheels, and a unique interior design.
